Projects

Documentation for the Projects section of the SiteTrax.io Service Portal, covering project configuration, user management, and integration settings.

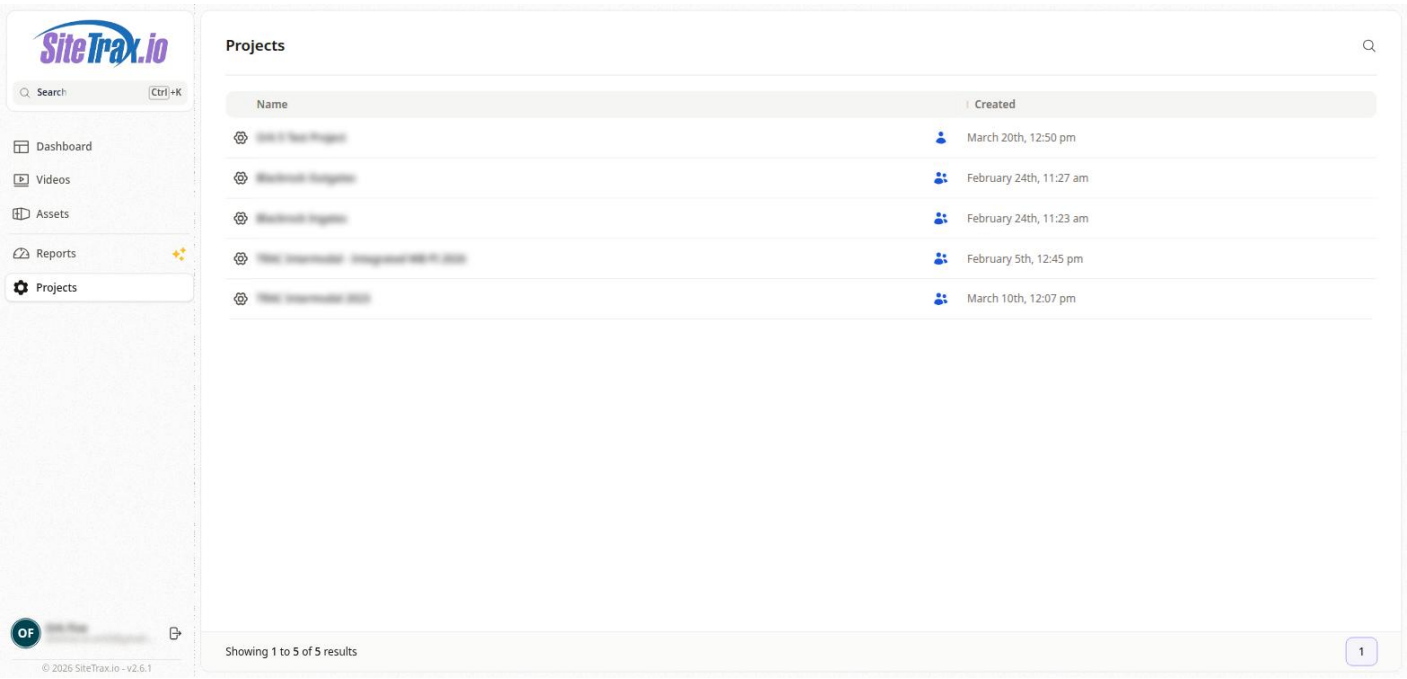

- Projects List
- Project Detail Page
- Project Users
- Project Integrations

Projects List

> **Retired page.** This documents the legacy SiteTrax.io service portal, which has been replaced by **SiteTrax.io Intelligence** at app.sitetrax.io. It is kept for reference only and is no longer maintained. For current guidance, see the SiteTrax.io Intelligence shelf.

The Projects page displays a table of all projects accessible to the current user. Each row shows the Project Name, a team icon indicating user membership, and the Created date. Projects are the primary organizational unit in SiteTrax.io - all videos, assets, and integrations belong to a specific project.

Clicking on a project name navigates to the Project Detail page. A search icon in the top-right corner allows users to filter the projects list by name.

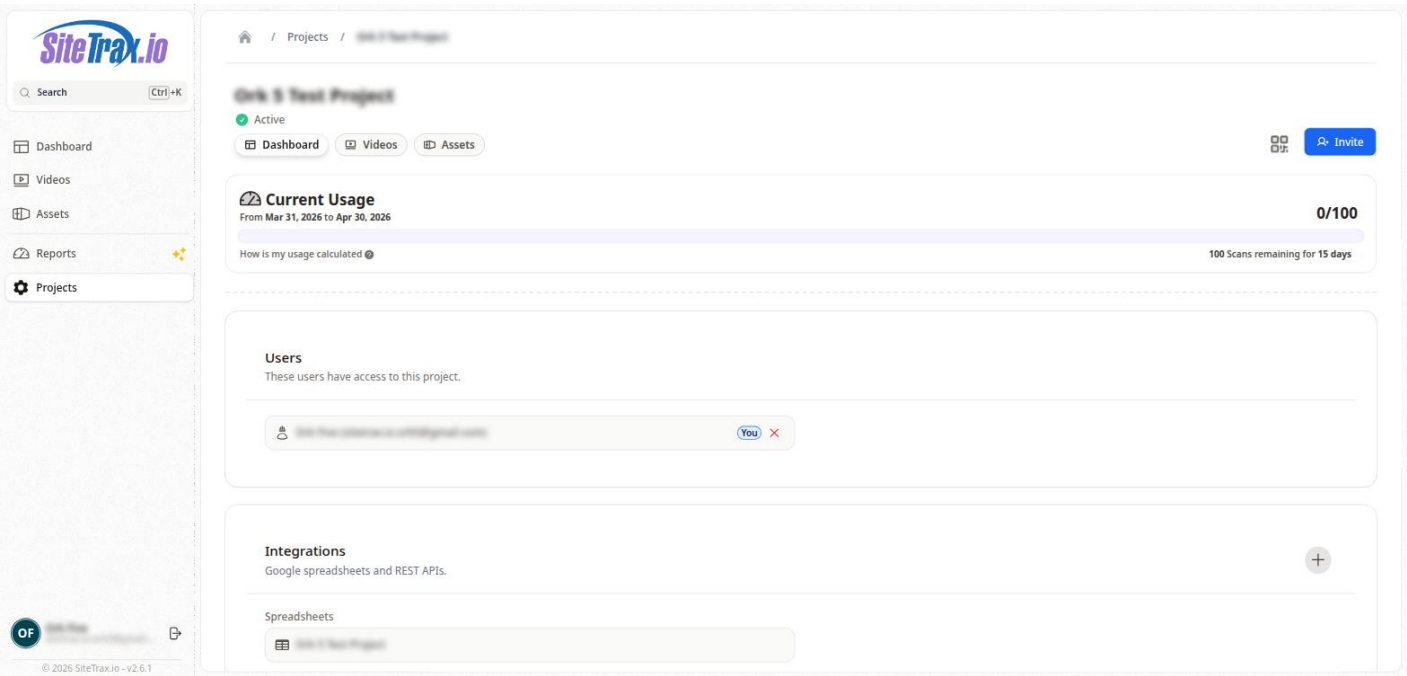

Project Detail Page

> **Retired page.** This documents the legacy SiteTrax.io service portal, which has been replaced by **SiteTrax.io Intelligence** at app.sitetrax.io. It is kept for reference only and is no longer maintained. For current guidance, see the SiteTrax.io Intelligence shelf.

The Project Detail page provides a comprehensive view of a single project's configuration and status. At the top of the page, the project name is displayed along with its status badge (e.g., "Active" with a green checkmark indicator).

Below the project name, three navigation tabs allow quick access to the project's Dashboard, Videos, and Assets views, which display the same data as the main Dashboard, Videos, and Assets pages but filtered to only this project.

An **Invite** button in the top-right corner allows project administrators to invite new users by email. A QR code icon next to it can generate a QR code for the project, which may be used for quick configuration of capture devices.

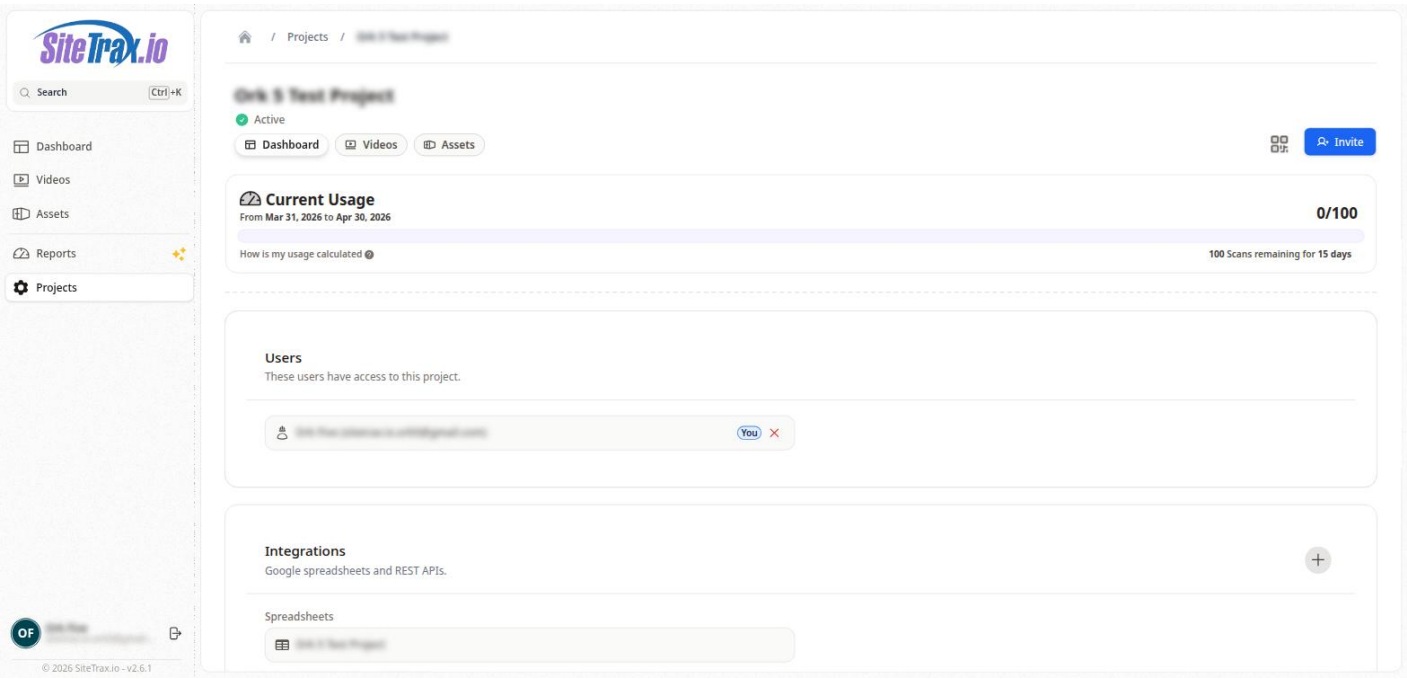

Project Users

> **Retired page.** This documents the legacy SiteTrax.io service portal, which has been replaced by **SiteTrax.io Intelligence** at app.sitetrax.io. It is kept for reference only and is no longer maintained. For current guidance, see the SiteTrax.io Intelligence shelf.

The Users section of the Project Detail page shows all users who currently have access to the project. Each user is displayed as a card showing their name and email address. The currently logged-in user is identified with a "You" badge.

Users can be removed from a project by clicking the X button on their user card. To add new users, click the Invite button in the top-right corner of the project page and enter the email address of the person you wish to invite.

Project Integrations

> **Retired page.** This documents the legacy SiteTrax.io service portal, which has been replaced by **SiteTrax.io Intelligence** at app.sitetrax.io. It is kept for reference only and is no longer maintained. For current guidance, see the SiteTrax.io Intelligence shelf.

The Integrations section of the Project Detail page shows all configured data integrations for the project. A "+" button allows administrators to add new integrations. Integrations are the mechanism by which SiteTrax.io automatically sends detected asset data to external systems in real time.

Integrations are organized into three categories:

- **Spreadsheets** - Google Sheets connections where asset data is automatically written to configured spreadsheet documents as new rows.
- **REST APIs** - HTTP webhook endpoints that receive JSON payloads for each detected asset in real time. These can connect to Yard Management Systems, Transportation Management Systems, or any custom application.
- **Chain.io Integrations** - Connections to the Chain.io cloud-based supply chain integration platform for enterprise-grade data routing and transformation.

Each configured integration is displayed as a named entry and can be clicked to view or edit its configuration.
