Asset Types

> **Retired page.** This documents the legacy SiteTrax.io service portal, which has been replaced by **SiteTrax.io Intelligence** at app.sitetrax.io. It is kept for reference only and is no longer maintained. For current guidance, see the SiteTrax.io Intelligence shelf.

SiteTrax.io recognizes multiple asset types based on how and where identification markings are detected on the asset. The most common types include **International Intermodal Vertical ID** (BIC code read from vertical markings on the side of a container), **International Intermodal Horizontal ID** (BIC code read from horizontal markings, typically on the top rail or roof), and Domestic container identifiers.

The Asset Type is automatically determined by the SiteTrax.io backend during video processing based on the orientation and format of the detected markings. Understanding asset types is useful for filtering and analyzing detection patterns across different container types and orientations.
