Video Detail Page

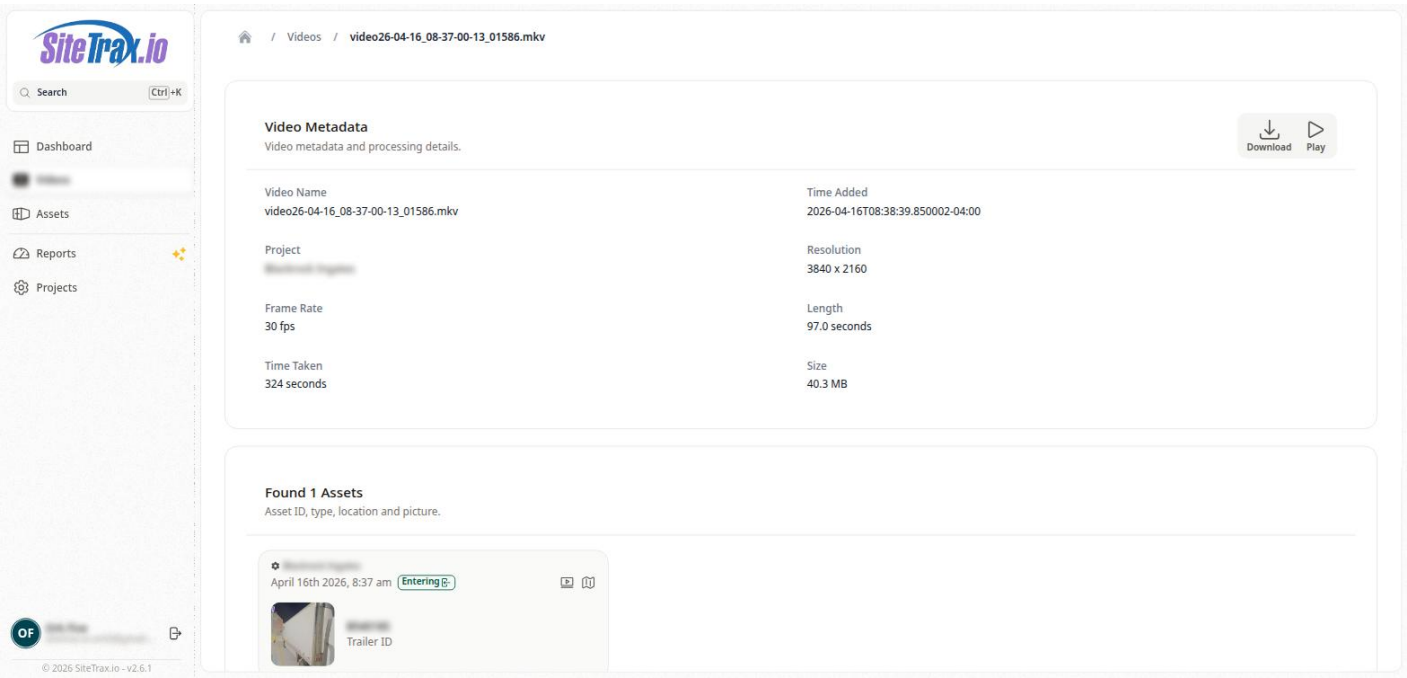

> **Retired page.** This documents the legacy SiteTrax.io service portal, which has been replaced by **SiteTrax.io Intelligence** at app.sitetrax.io. It is kept for reference only and is no longer maintained. For current guidance, see the SiteTrax.io Intelligence shelf.

Clicking on a video name from the Videos list opens the Video Detail page. This page is divided into two main sections: Video Metadata and Found Assets.

The breadcrumb navigation at the top of the page shows the path: Home > Videos > [Video Name].

The Video Metadata section displays detailed technical information about the video file, including the Video Name (the original filename), Time Added (the timestamp when the video was received by the platform), Project (the associated project name), Resolution (e.g., 1920 x 1080), Frame Rate (e.g., 15 fps), Length (the video duration in seconds), Time Taken (the wall-clock processing time in seconds), and Size (the file size in MB).

Two action buttons are available in the top-right corner of the metadata section: **Download** (to save the original video file) and **Play** (to view the video in the browser).
